PREFACE

This report is prepared in response to CIA requirements C-RR4-82,056 through C-RR4-82,064. It presents locational and other pertinent information on all Soviet-type surface-to-air missile (SAM) installations, and updates the existing series of reports on this subject. 1-8/ Installations included are SAM launch sites (SA-1, SA-2, SA-3, and SA-0), antimissile-missile activities, SAM support facilities, SAM R & D and training facilities, and un-

identified installations, possibly SAM related. The information is presented by World Aeronautical Chart (WAC), and within each WAC by SAM defense area, as determined from photography and collateral sources. When the defense function of an installation cannot be determined, this is so indicated. Where no installations have been identified in a WAC area, that WAC has been omitted.

INTRODUCTION

This report presents information on Soviet-type SAM installations throughout the world and identified on photography. The cutoff date for this information is []

[] In order to facilitate the recognition of additions to and deletions of SAM installations from the previous series of reports, 1-8/ new installations are shown in blue in the text, and installations which are no longer valid have blue lines drawn through them. New items are shown in blue on the graphics, and invalid ones have a blue "X" printed over them. The letter designating the SAM defense area on the table is repeated on the graphic for easier reference.

All photography referenced in the text is TOP SECRET [] or TOP SECRET [] except as otherwise cited beside the specific photo reference. [] information has frequently been used as background material in determining the composition and functions of the various SAM defense areas.

Diagrams of the configurations of the common types of SAM installations are presented in Figure 1. Figure 2 shows all the WAC areas, except Cuba, which are covered in this report, and Figure 3 shows Cuba. The specific WACs which are covered are shaded in red. Information for each WAC is shown in a table which gives detailed data; it faces a map which indicates the location and type of each SAM installation. Because of the volume

*Included at the end of this report are a listing by WACs of additions and changes to installations in the body of this report from [] and summaries, by WAC and by country, of all Soviet-type SAM installations identified on photography []

of data for several of the tables, the corresponding figures have been repeated for easier reference.

Explanations of the columnar headings used in the tables are as follows:

Item--Given in numerical sequence for each WAC, with numbers assigned to installations arbitrarily, and keyed to the accompanying WAC.

Name, Site Designator, BE Number--In accordance with the TDI. Absence of any of this information indicates that it was not available at the time of publication.

Coordinates--Given in degrees, minutes, and seconds, and plotted from Series 200 US Air Target Charts unless otherwise indicated in the next column.

Country & Map References--BE country codes used. Map reference is to the US Air Target Chart sheet number (scale 1:200,000) unless otherwise indicated.

Type & Configuration--Indicates the type of SAM installation and its configuration as illustrated in Figure 1.

Mission & Date First Appears--Gives the number and date of the mission on which the installation was first sighted, and the classification of the photo reference if other than TOP SECRET [] or TOP SECRET []

Mission & Date Installation Negated--Refers to the latest [] photography on which it has been established that construction of the installation had not been started. Absence of any notation indicates that this information could not be determined. Classification of the photo reference is indicated if it is other than TOP SECRET [] or TOP SECRET []

Remarks--Covers items of special or unusual interest.

A	USSR Northwestern Border SAM Defenses (in defense of the northwestern border of the USSR and Leningrad, second largest city in the USSR; major shipbuilding and naval facilities; airfields; and defense research, development, and production facilities)						
1	Leningrad SAM Site B99-3, [REDACTED]	60-01-30N 29-41-30E	UR 0103-25	SA-3, configuration G			Construction at this complex was suspended early in 1962, following a probable change in concept, probably based on a decision to modify radically the associated electronic facilities. The original concept was a probable dual-function AMM/SAM defensive system. The major change in electronic facilities possibly indicates a switch to primary emphasis on a long range SAM role against air-breathing vehicles. Since this is not a unanimous conclusion of the intelligence community, and because the original AMM role cannot be ruled out, the complex is being carried as an AMM/SAM installation. This SA-3 site is located within the security fence which surrounds Probable AMM Complex D34.

Construction at this complex was suspended early in 1965, following a probable change in concept, probably based on a decision to modify radically the associated electronic facilities. This modification program is currently being implemented at the NW and NE complexes, where the major change in electronic facilities possibly indicates a switch with primary emphasis on a long-range SAM role against air-breathing vehicles. This modification program has not yet been initiated at this complex. As this is not a unanimous conclusion of the intelligence community, and because the original AMM role cannot be ruled out, the complex is being carried as an AMM/SAM installation.

Believed to be a probable training facility, because of its location with respect to adjacent building area, and its orientation. This is 1 of 4 such facilities located at Leningrad.

Table 25. SAM Installations on WAC 168

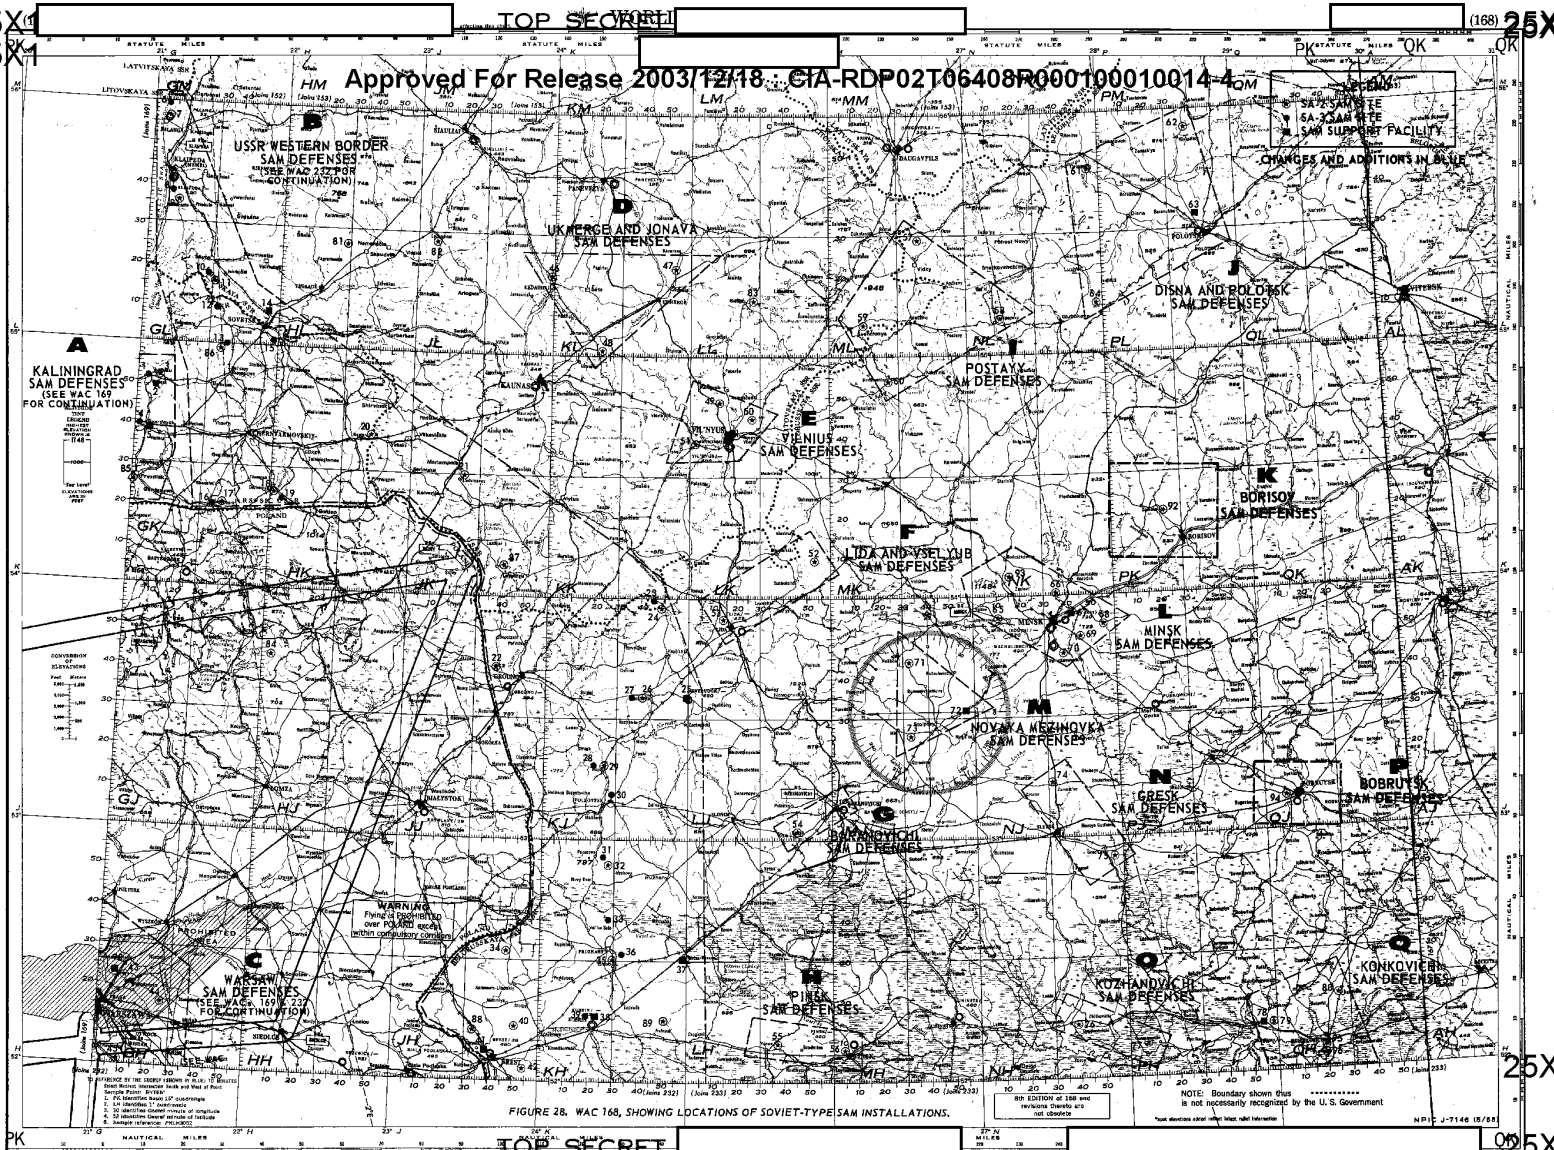

Item	Name, Site Designator, & BE No	Coordinates	Country & Map Ref	Type & Configuration	Mission & Date First Appears †	Mission & Date Installation Negated †	Remarks
NOTE: It is probable that the Soviets have attempted to create a zone defense in the USSR portion of this area, since many of the sites on the Soviet side of the border do not fall into obvious defense patterns. An attempt has been made to group these sites into logical complexes; however, it is recognized that the arrangement presented here is only one of several possible solutions. Those sites whose defensive role cannot be determined and which are not located within the limits of a SAM defense area are found under subheading R-4 "Defensive Role Undetermined".							
A Kaliningrad SAM Defenses (in defense of strategic rail and water transportation routes; military supply depots, training bases, and garrisons; shipbuilding and railroad stock manufacturing; and MRBM complexes)							
1	Polotsk SAM Site A17A-3, [REDACTED]	54-50-40N 21-06-40E	UR 0168-6	SA-3, configuration undetermined			This installation has been negated as a SA-3 Site. [REDACTED] 3 of the 4 revetted launch positions were being graded over; however, the site configuration remains.

Only 5 launch revetments are visible at this site.
The proximity of this site to surrounding buildings suggests that it may be a training site.

~~signature read pattern~~ This site was negated

This site may be used as a training site, because of its proximity to a barracks area. The configuration of this site has been altered somewhat to fit the surrounding terrain.

SUMMARIES

The information in the following summaries combines the totals from the body of this report and from the addendum immediately above. In assessing these statistics, the following comments may be helpful:

1. The total shown for the SA-2 sites includes the 14 SA-0 sites. Currently it is believed that these SA-0 sites are, in fact, simply enlarged SA-2 sites and should no longer be treated separately.

2. Included within the SAM support facility figures are Type I, Type IA, and Type II facilities; the large missile assembly and storage facilities such as those at Moscow; and the newer missile support facilities such as the one at [redacted]
3. Each installation to which a training role has been assigned is listed under its appropriate heading. These training installations range in size from a

simple, single launch site to the more elaborate, multiple launch sites such as the installation near Kordon, USSR. These single launch sites are only listed with the training areas and are not listed again with the operational sites.

4. The totals shown include all suspect, possible, probable, and confirmed installations of each type.
